

Brunswick Beach Mini-Change

The Brunswick Beach mini-change will include an underpass with northbound on/off ramps located south of the underpass and southbound on/off ramps located north of the underpass. The following are some of the benefits of the Brunswick mini-change:

- Separates local traffic from Sea-to-Sky Highway
- Better turning radius for larger vehicles including fire trucks for emergency response
- Facilitates safe vehicle movements in all directions
- Safer pedestrian movement across the highway
- Improved sightlines on the secondary roads for stop signs and through the underpass
- New on-ramp and off-ramp lanes that are longer for better acceleration and deceleration
- New off-highway transit stop location
- Additional traffic calming measure as this facilitates a more curvilinear highway alignment
- Connectivity between Brunswick Beach on the west side of the highway and homes on the east side, for pedestrians, cyclists and vehicles
- Flatter intersections
- More landscaping opportunities
- The current left turn across traffic to Brunswick Beach is eliminated
